Product	InStock App
Release Version	3.5.19.15
Document Type	Release Notes
Supported Devices	Zebra and Honeywell devices
Supported Admin Console Versions	1.0.40.0 and latest 3.5.22.0 versions

Release Summary

This release introduces updates to improve compatibility, connectivity resilience, and overall application stability. InStock App version 3.5.19.15 supports current Zebra and Honeywell device platforms, maintains compatibility with supported Admin Console versions, and improves operation across both online and offline usage scenarios.

Compatibility and Platform Support

- Built using the latest development framework to maintain platform currency.
- Supports Zebra and Honeywell handheld devices.
- Compatible with Admin Console version 1.0.40.0 and the latest 3.5.22.0 versions.
- Supports both online and offline operating modes.

Network and Connectivity Enhancements

- Added real-time detection of server connection and disconnection events.
- Improved handling of weak Wi-Fi signal conditions by disconnecting from the server and stopping retry attempts when signal strength is insufficient.
- Added in-app support to add, connect to, and disconnect from Wi-Fi networks.
- Added support for custom DNS configuration.
- Added support for domain names when a custom DNS server is configured.

User Experience Improvements

- Added support for selecting application themes.

- Improved background operation so the app can remain connected to the Admin Console after it is closed.

Resolved Issues

- Resolved an issue where the app could freeze after a server disconnection.
- Resolved an issue where the app could crash during data download.

Upgrade Notes

- Refer to InStock_Application_Update_Process.pdf for update instructions.
- Post update dynamic IP users need to configure DNS settings and mark as Active.
- Post update users should always sync reference data and confirm functions.
